The Theory of Evotion Exposition

The theory of work in thought evolution: Evotion Theory

The mind is reaction of matter generating heat outside the effect of gravity in the amphitheater of the skull. Thought and feelings are vibrational beyond the nervous system of the anatomy of the body, even possibly in the internal functions of a cell's respirations in the mitochondria and interactions of stimuli. Stimulus is a effect of thought in body both before and after stimulus producing a cycle of feelings in the communication of body. Therefore, if dreams are a product of thought and stimulus processing, dreams are processes of stimulus in transpondence of the body and vibrational interactions between cells, including the brain, signaling in cycles between the parterre, balcony, and auditorium as collective conductors and the orchestra. The observational environmental particle vibrations stringing together an interference of sonic frequencies in wavelengths consistently permeate the space of matter in transitions between particles and waves. The particle wave transitional effect disproves the perception of the duality of waves and particles due to the dimensional state of abilities in the spectrum of light. The effectual particle is traveling on a projectile motion of sound due to gravity and heat counteracting the ability of a particle to fall or extinguish from the density and tension of matter particle. The momentum of sound in fluctuation is producing particles to be forced in multiple directions at once from sound bending between frequency cycling as a state of ability and dimensional effect. Thus, producing the force of particle matter at a density range to travel at slightly varying velocities of a small enough range to calculate a constant speed between the density of particle matter and it compositional chemistry. Since matter has a the potential of a compositional chemistry that is reflective and transparent, would produce the possibility for a particles composition to enable the particle to travel from the force of the frequency bends of light. Thus, proving the state of multi-dimensional matter, matter's compositional abilities in space beyond gravity, heat, and time. The potential from the capacity of thought synapses, spinal and cerebral fluid, and the brain's impulses to produce a range of frequency cycles as a dimensional field effect encompassing two fields around the body that would amplify a particle force to carry matter at the state of potential and force kinetic velocity with a environmental constant force of air, sound, heat, gravity, and time. The conclusion of force in the environment and frequencies from the effectual fields of many minds produce the potential forced movement of multi-dimensional matter to travel from one field to the next as a method of communication in the mind.

The boundary of the body's state of liquid viscosity would produce an potential for MD particles to slow in a transitional movement within the cycles of spiral frequency fields produced from the body's

May 30, 2018

production of heat beyond gravity at the state of a liquid. In effect, the organs of the body, such as the frontal horn of the insula, could potentially be a reception of particles in transitional states traveling in an orbital cycle, the Meory Orbital. The function of the brain, and the fields of the mind, in the reception of MD matter would potentially produce a contextual index in a time differential to the spectrum of light, a quaver of sound, a ductere of heat, and effect beyond gravity. The measure of memory in a differential time-index within multidimensional states would constitute a range of thought as Meory. Thought then encompasses the nerves system and the pheromonal production in many different hormonal glands in the brain and body constituting memory to cooperatively context feelings in a measure of Co-meory. The experiences in life and the neurophysiology patterning of brain cells in clusters that form behavior within the memories produced from the measure of Co-meory, produce a cycle of memory in the duration of life which would constitute a separate measure, O-meory. The ability to feel and logically remember what feelings were felt at the time of thought and isolating the feelings in a spectrum of several emotions, not a singular emotions, from the evolution of memory in cycles produce an isolated thought measured as, E-meory of evotions. Evotions being defined as a spectrum of feelings beyond just thought and the singular thought of emotions producing a measure of spectral emotional thought, E-meory.

The ability to isolate a feeling of emotion in thought does not equate to a human being feeling a singular emotion at any moment in time, but just a thought of an emotion of an evotion, a spectrum of emotions concentrated into a singular moment in time. The body's complex systems of stimulus, connections to organs, structure of movement, and circulatory system of cell production generate a communication cycle of organs that transfer information to and from the brain in a system of procommunicative organs. The brain and spinal cord is a very unique structure of nerves, bones, glands, singular and a multiplex organs with porous membranes, and connections to all other systems of the body's functions that work together in a direct connection at the cerebral cortex in a cyclical system of cooperative communication, co-communication. This informational system is a code in the production of genetic material and reproductive organs of DNA and RNA as well as the decomposition of matter within the stomachs processes of RNA inscription would force a conclusion of environmental complexity in gene expression. This conclusion reaches a point of DNA being produced in a chronological order beyond time as a multi-indexed system of contextual planar dimensions in a non-linear and non-helix calculation in geometric matrices of effectual dimensional states of abilities as a matter of mathematical sums encompassing DNA transcription cycling the environmental metrics as an inclusion.

The inclusion of environmental ecology and physiology in decay and digestion in a process of fission in warm climates of the ground and digestive anatomy as particles bond in cohesion, cause matter to cycle code of DNA and RNA evolutionarily in cycles of Warm Fission to reach stability. The cycle of warm fission particles throughout the habit of human beings, immune systems, organs reach within the body reactions to toxins forming allergens. Then, the procommunicative organs in the body's evolutionary cycle close the equation of adaptation within specific species with the environmental variables of the cycle, Warm Fission, to prevent gene expression to succumb to the same toxic influence completing

May 30, 2018

another evolutionary chain of inclusion in the Inter-species Evolution and Chronological DNA of adaptation in gene expression of Chronometric Geo-calculus. The chromosome's division is not a simple expression of viral transduction and is a fractal division of adaptation in environmentally contextual expressions as a structure of a double-helix and if separated on a two dimensional format, a spirulitic pattern presents itself, showing pivotal points of what is observed as a viral enzyme, fractally diverting the structure of a cell to mutate. This mutation of a cell by what is considered viral, is nothing but a fractal chromosome adapting the cell to a new formation of evolution, for better or worse. This observation can be seen across the eco-systems in micro-organisms and macro-organisms outlining the environmental factors of Inter-species Evolution of RNA transcription from the an evolutionary cycle of organisms, Floral Evolution. This evolutionary cycles consist of a figure of survival within encoded information being transferred from organisms to microfauna and macrofauna beyond the perceptual barriers of fitting in linear cycles of theory built in the past that do not contextually meet in the paths of evolution of the present information, which equates life is communication. The act of changing facts to fit the theories of men in the past is a scientific abomination of the standards of education and progress from mistakes of perceptions and the fear of slandering professionals within families in the present context. The facts of present do not add up to facts in the theories of the past and plastering words together, create the facade of the theoretical foundation education and academics was built, is producing a fictional fact of men as gods in theory.

Life encompasses my different variations of sex in history in the context of theory, and the application of the observation of light in matters of life that don't exist in the spectrum of light is Vitamorphism, by defining terms being ethically wrong in life because it appears to be dark in value. The application of the dimensional spectrum of light to the reason of value in a margin as decisions, the ethics of life, does not occupy the spectrum of light and the context of right and wrong appears in time, not light. The widely confused application of dimensional spaces, dark matter, and technology in history began in the 1800's and it took two hundred years for humans to understand the proximilization of space and the fields of energy between space and light, as a dimensional, effectual particles in transition. The dimensionals between measurements in fields are the effect of the states of ability and matter. The matter of fact is a dimensional of context, the observation in light appearing dark, the reason ethics evolve in contextual time. Facts are contextual to the timeframe that exist in space and humanity's existence in life, with energy. The observation of chemistry, the reaction of compositional matter, in abilities of states is not contextual to the observation of the energy existence. The reaction of energy in fields and the movement of particles between these fields and applying consciousness to the fields of life is not observable in technology, although because life exists in fields of energy and between these fields of consciousness, the deduction of the energy existence effects consciousness not vice versa, the observation of duality in life and energy. This deduction is the process in two fields of mind that exist in the state of frequency from the field of brain and body, the mind and Xtra-conscious mind, The Xtra-consciousness of the mind is the processing of information of variables from the the field of the energy in the spinal cord and brain coexisting in the environment beyond the body and the processing in the brain between the field

May 30, 2018

of the brain, the mind. The reason that two fields exist in the body and beyond the body is the boundary of capacity in the cerebral and spinal fluid of the brain and spine. The energy existence between these two fields of consciousness are the brain's ability of transpondence and the particle-wave transitional effect, between many states of matter defining abilities. The dimensional effect between fields that are not understood as a proximinal effect to the observer can be perceived as consciousness and is the duality of good and evil. The ethics of observation and vitamorphism in time without context and consciousness not being a chemical reaction.

In life, the communication through multi-dimensional matter is observable in the state of abilities in matter composition due to reaction of chemicals, or energy mimicking the essential freedom of compositional components, the exchange in the energy existence between the fields of the body, mind, and environment. This mimical reaction in evolution is a Fractal Chromosome, observed as an enzyme, a chromosome that can seat itself in the DNA code at a pivot point to deviate the structure in a new revolution. The Fractal Chromosome is proof of that multidimensional matter is in the same planar existence in dimensional space, just happening before the perception of the Evolutionary Chain of Inclusion. DNA is structured for the purpose of evolutionary inclusion and the decomposition of the fractal DNA formation to cycle in life at multiple state of abilities in many lifeforms through digestion, excretion, soil enrichment, and nutrient absorption. The immune system is an procommunicative system for Fractal DNA to evolve species to a inclusion of the DNA structure of offspring and to begin again, the cycle of effectual particle transcription in RNA, the Onemore Cycle. If a virus is a Fractal Chromosome, who is the virus? The Viral Figuration's Foresight?

The observation of a fractual piece of information has the potential of evolution due to the mimical effect of energy in existence, are the fields of exchange, an infinite effectual field funneling exchange, in transitional movement of a fractual code transforming the impossibility of observation into a closure of energy evolution in the fields's ability of formation to figurate a Fractal Root, The Equatom. The Equatom is a fractal root of multiple fractals in transition at each boundary and pivotal points, to form a closure of transformation to a root. The Fractal Root, a evolutionary code of life, The Equatom of Resijation. The existence of information is not enough unless it is communicated in context to enclose the origin of the root, otherwise a viral pivot is formed in thought, the decomposition of creativity. This movement in multi-time frames has transitioned life in the ERA of Proximinalizational Understanding, EPU, the time that the boundary of intellectuality is a decompositional factor of humanity and communication.

The EPU in context to time, will Multidimensional Matter have a inclusion in a reaction mimicking a fractual root, a structure of improbability, to exist in a state of ability to a omiexistance not conscious of the work in communication?

The Omiexistent Object's acknowledgment of the environmental reactionary exchange, The fossil's love in time, is the Omiexistant Object's voice of MD matter, a power of a fractual root, seeking the closure of motion in time to grow has a

May 30, 2018

fractal seed. Is the absence of space, the observation of mind in mediation, a fossil's love in time communicating the existence of Vital Communication Particles?

The object öle

The object's question of work?

The particle's impulse to seed?

The body's dream, and the density singularity.

Will thought exist, if dreaming is an addiction and a person minimalizes functional life to sleep without dreaming?

Will a zygote form, if the menstrual cycle is a voluntary thought and thought is a technological dependency?

Will memory evolve, if memory is an addiction at birth and addiction is a voluntary choice in a zygote?

Can a zygote and sperm dream, if technology eliminates memory in DNA?

Therefore, will reproductive organs develop a cellular network for memory for the purpose to communicate memory immunity cycles beyond the DNA code. The body of dreams to process thought and feelings to prevent the brain to acknowledge thought in order for the brain to communicate through energy transcribition with the environment to know pain before the environment impacts the body from processing evotions. The body's nervous system is a function of time indexing the past reactions for future interactions with lifeforms and matter by the existence of MD matter moving in space, time, dreams, and a dimensional state of objective perception, profection. The ability to profect would prove the existence of a space for time to elapse infinity, a multi-dimensional cycle as a space, state, and an ability. The Onemore Cycle of Calculons is not limited to a simple observational expansion and contraction of matter and consists of a mathematical combination beyond academy's current scope of understanding. The fact of education has reached a limit in the observation of behavior and will never observe the interconnection of the evolutionary chain of inclusion through the current methods of isolating variables that do not include geometric calculus with respect to humanity and the living rights of life in all forms. The educational system of observation can be structured differently involving children to enjoy educational structure as means of contextually gathering information by means of play in the local habits of environmental bioregions within simple observational referencing systems of context in technological devices. This freedom in the pre-school to middle school structures would allow children to learn the basic knowledge of math, science, language, and ethical values of association to where physiology and ecology play vital roles in life. Life is not a repetional cycle, it is evolutionary. The evotion of thought and the spectrum of emotions in a singular timeframe.

The observation of deduction and the energy to understand the dimensional fields in life beyond the currents laws of physics as reached the point in life to change facts in all timeframes and not in context, thus producing the oblivion of the original observer in the energy existence. The lack of acknowledgement in the time that observation happened and the spread of ideas from the original observer in the energy existence will delete the original in all timeframes, Thank you and maybe hello. The relativity of measure.
